It is the product of a chimeric gene (T37176) produced by ligating a synthetic sequence for the 4-copy GnRH into vector pAA352 (ATCG 68283), which carrie the LKT-352 gene. Recombinant plasmid pCB113 (LKT 352:4 copy GnRH, ATCG 69749) was obtd. Escherichia coli transformants produced the chimeric-protein, which is useful as a vaccine for fertility control, esp. immunological sterilisation of domestic or farm animals.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence represents the LKT-GnRH chimeric protein from pCB113. This plasmid contains the LKT 352 polypeptide (W79568) fused to four copies of the GnRH peptide. This chimera lacks cytotoxic activity which enables there to be an increase in antigen presentation and thus an optimal immune response. The removal of this region also enables the truncated LKT to be expressed at much higher levels and allows the amount of antigen administered to be reduced. This chimeric protein comprises a leukotoxin polypeptide, several multimers, and a GnRH sequence. The chimeric protein can be used as a vaccine to help reduce the incidence of mammary tumours in a mammalian individual.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence

                                                                                                                                                                                                                                                              Y3330-939). The myostatin peptides are derived preferably from a region of amino acid residues 1-275, 25-300, 50-325 or 75-350 of the above sequences. The peptides and the nucleic acids encoding the peptides are useful as vaccines for eliciting an immune response in a vertebrate against a myostatin immunogen. They result in increasing body weight, muscle mass, number and size of muscle cells, muscle strength, mammary gland tissue, lactation, appetite or feed uptake, life span of the vertebrate, and cause a reduction in body fat content, useful for muscle wasting conditions. The vaccines are also useful for treating a disorder which comprises degeneration or wasting of muscle in a vertebrate, and useful for modulating GDF11 activity. The present sequence represents a leukotoxin carrier protein (LKT 114) which is used as an immunological carrier protein to form a myostatin immunoconjugate.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Myostatin; mouse; rabbit; human; baboon; bovine; porcine; ovine; chick; turkey; zebrafish; immune response; vaccine; body weight; muscle mass; mammary gland tissue; lactation; feed uptake; muscle degeneration; GDF11 activity; LKT 114; leukotoxin carrier protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     09-NOV-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Y33929 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention provides myostatin peptides consisting of 3-100 amino acids, derived from a region of mouse, rabbit, human, baboon, bovino porcine, ovine, chick, turkey or zebrafish myostatin (see sequences Y33930-939). The myostatin peptides are derived preferably from a reference of the control of the con
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New myostatin peptide, multimers and immunoconjugates for eliciting an immune response in a vertebrate against a myostatin immunogen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 19-FEB-1998;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Leukotoxin carrier protein (LKT 114).
                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Example

The oligonucleotides were annealed and ligated into vector pAA352 (contg. the Pateurella heamolytica leuko-toxin gene) which had been digested with BamHI. The ligated DNA was used to transform E. coll strain MH3000. Transformants contg. the oligonucleotide inserts were identified by restiction endonuclease mapping and the recombinant plasmid designated pAA502. The chimeric protein produced from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Immunological carrier system with enhanced immunogenicity comprises chimeric protein comprising leuco:toxin peptide homologous protein fused to antigen esp. somatostatin or gonadotropin releasing hormone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            plasmid works to bring about a larger immune response than the antigen alone, i.e. the leukotoxin works as a carrier protein. This sequence represents a fusion between bovine gamma interferon (IFNgamma) and Pasteurella haemolytica leukotoxin (LTK). The leukotoxin gene, ItkA, was isolated from a gene library of P. haemolytica by chromosome walking. Immunogenic fusion proteins

22-AUG-1990;
16-OCT-1991;
                                                                                                                                                                                                                                                                                                                                       bovine gamma interferon (gamma IFN) sequence and a leukotoxin sequence. The chimeric proteins of the invention comprise a cytokine, selected from interleukin-2 (II-2) and gamma IFN, linked to at least one RTX toxin epitope (preferably the sequence shown in W13865). The RTX toxin used to provide the epitope sequence is preferably a leukotoxin, especially the full-length Pasteurella haemolytica leukotoxin. Alternatively, the leukotoxin is a truncated leukotoxin lacking leukotoxic activity, especially LKT352. The chimeric proteins can be used for the production if vaccines against respiratory diseases such as pneumonia, particularly fibrinous pneumonia caused by P.haemolytica, including shipping fever in fibrinous pneumonia caused by P.haemolytica, including shipping fever in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          W13866 and W13867 represent immunogenic chimeric proteins of the invention. This sequence represents a chimeric protein containing the

From this, two constructs were made in the ptac-based vector, pgH432:lacI digested with smaI. One, pAA342, consisted of the 5' AhaIII fragment from lkth while the other, pAA345, contained the entire MaeI fragment. Clone pAA342 expressed a truncated leukotoxin peptide at high levels while pAA345 expressed full length leukotoxin at very low levels. The 3' end of the lkth gene of pAA345 was therefore ligated to StyI.PamHI digested pAA342 to yield pAA352 contg. the LKT352 sequence. The protein expressed from the vector can be used to prepare a subunit vaccine with other P. haemolytica antigens, e.g. finbrial protein, plasmin receptor or 50K outer membrane protein. The vaccines can be used to protect cattle from respiratory diseases such as pneumonia, esp.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                to the same position on gels.
The LKT352 gene was prepd. as follows: lktA, an Mccontg. the gene was ligated into the SmaI site of pAA179. From this, two constructs were made in the pAA179.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Vaccines for Pasteurella haemolytica infection in cattle comprise sub-unit antigens from P haemolytica fimbrial protein, plasmin receptor, 50 K outer membrane protein and leukotoxin.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              547
```

incubating cell lysates with bovine neutrophils and measuring the crease of lactate dehydrogenase from the neutrophils. A 4kb cragment was obtd. Progressively larger clones were isolated by chromosome walking to isolate full length recombinants of ca. 8kb, in partial the clone was subjected to restriction enzyme digestion to yield two clones, one expressing truncated leukotoxin peptide at 1 cm partial to the other expressing the full length leukotoxin at 1 clone was subjected to restriction enzyme digestion to yield two clones, one expressing the full length leukotoxin at 1 clone levels and the other expressing the full length leukotoxin at 1 clone was ligated to the truncated gene clone to yield plasmid parafs2. The 2 clone was used to produce chineric proteins by gene fusion with an 2 carrier protein to generate fusion with an 2 carrier protein to bring about a larger considered that the antigen alone. Immunisation with these antigens can regulate growth rate, lactation and reproductive efficiency cas also parafected. and that had been boosted with a conc. culture supernatant of p. haemolytica to increase anti-leukotoxin antibody levels. Positive colonies were screened for their ability to produce leukotoxin by Gene libraries of P. haemolytica Al (strain B122) were constructed in lambda gtll and pUCl3. Resulting clones were used to transform coli and individual colonies were pooled and screened for reaction with serum from a calf which had survived a P. haemolytica infecti R34546-8 ength clone pAA352. The infection efficiency.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   B
         P. haemolytica recombinant leukotoxin from pAA352.

P. haemolytica recombinant leukotoxin from pAA342, contained the So-ahali fragment of the 1tkA gene, while the other, pAA345, contained the entire 1ktA gene, while the other, paa345 contained the entire 1ktA gene. pAA342 expressed a truncated Leukotoxin peptide at high levels, while pAA345 expressed full length leukotoxin at very low levels. Therefore, the 3' end of the 1ktA gene was ligated into pAA342, yielding plasmid pAA352.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CA2099707-A

It is the product of plasmid pAA352 which carries a truncated lktA gene (T37179). A fusion protein (W03942) between LKT352 and a gonadotropin releasing hormone tetramer can be expressed in Escherichia coli. This is useful as a vaccine for fertility control, partic. immunological sterilisation of domestic or

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The hly genes and the intergenic region are absent from bacteria not associated with these diseases and so provide a useful target for detecting EHEC pathogens, esp. 0157:H7 serotype E.coli. The present sequence is that of the protein encoded by the EHEC hlyA gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     964 GCACTTGTACTTGCAGATAAAAATGCTTCAACAGCTAAAAAAGTGGGTGC

The plasmid was constructed by two successive additions of DNA coding for a dimer of LHRH analogue into the Smal site of pBTA862 (see Q11020) which all ready carries four copies of the LHRH sequence. After transformation, colonies with 8 LHRH molecules were identified. Fusion proteins with multiple inserts generated a higher anti-LHRH response (as measured by the binding of (125)I-LHRH at a serum dilution of 1:2000 final) than constructs with a single insert, in outbred mice and dogs. The fusion proteins can be used to inhibit reproductive functions in vertebrates.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Fusion proteins comprising LHRH analogue and TraTp (analogue) useful in vaccine for inhibition or control of reproduction in vertebrates, esp. domestic animals
